Vulnerability Lifecycle Managment

SERVADUS

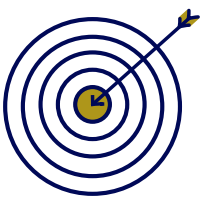
Service Includes

Asset Managment

Vulnerability Scans

Threat Risk and Prioritization

Patch Deployment



Take control of cyber risk with the Servadus Vulnerability Lifecycle Management. A service powered by Qualys works On-premise, on endpoints, and in the cloud. The service supports asset inventories, scanning for vulnerabilities, identification of risk, and automated patching. The collaboration between your team and Servadus ensures a program results in the lowest risk possible.
